POLYTECH High School

POLYTECH School District

We march

The fires of our souls burn beneath our feet.

We march for the unheard scientists,

The withering wildlife,

And the collapsing ecosystems.

Strained calves, and dry throats.

We march.

Every breathe harder than the last as the summer sun beats down with its new found strength .

We march.

We march for the scientists in 1992 who were neglected when proposing a crisis.

We march for those twenty-eight years,

Those twenty-eight years of silence.

We march.

We march for all the school children sacrificing their fridays.

Seeing the destruction of the crisis and deciding to take action in their own hands.

Sitting out of school in hope of a higher power to take notice of their cause.

Now, we march.

We march for the rising greenhouse gasses.

We march for the rising dead zones in the ocean and the animals who have lost their homes.

We march for the pollution of our air and soil,

The rising oceans,

The droughts,

And the erosion of our soil.

We march.

We march for Somalia as locusts raid their homestead.

We march for Brazil, Australia, and California as raging infernos sweep their backyard.

We march the future countries and homes,

That may play victim to these consequences of change.

We march.

With the sweat shimmering down our backs,

we march to the sound of a right, beating future.

A future, where we will be heard.

A greener, cleaner future.

We march.
